

KIRF: I can find a fraction of an amount.

Children should be able to use their knowledge of finding unit fractions of a quantity, to find non-unit fractions of a quantity.

Concrete	Pictorial	Abstract
	<p style="text-align: center;"><u>What can this look like</u></p> <p style="text-align: center;">$\frac{2}{5}$ of 20</p>	$20 \div 5 = 4$ $4 \times 2 = 8$ $\frac{2}{5}$ of 20 = 8

Questions

What is $\frac{3}{5}$ of 20?

Can you draw a bar model to represent $\frac{2}{3}$ of 30?

Key Vocabulary

Denominator- The bottom number in a fraction. Shows the number of equal parts in the whole.

Non unit fraction- A fraction where the numerator is not one.

Numerator- The top number in a fraction. Shows how many parts we have.

Unit fraction- A fraction where the numerator is one.

Activity Ideas

Solve it: $\frac{2}{5}$ of ____ = 15

Use the bar model to help you. How many parts are in the whole? How many parts do you have? How many parts does the 15 represent?

Prove it: use the bar model to prove $\frac{4}{7}$ of 56 = 32 is correct

Explain the marvellous mistake: to find $\frac{2}{5}$ of 20 Kai says, "First you divide 20 by the numerator and then times that answer by the denominator."
